

ABSTRACT

A machine for dyeing textiles, includes a structure (1) able to receive a plurality of containers or vessels (2; C) holding substances which contribute to form dyeing baths within suitable dyeing tanks (3). A plurality of dyeing tanks (3) and a plurality of material-holding baskets (4) are located at corresponding and present positions. A motor-driven carriage (5) is associated with the structure (1) and a supporting device is provided (6; 8) for removing and subsequently delivering the substances held within the vessels (2; C). The carriage (5) supports structure (7) for removing and handling the material-holding baskets (4). (Fig. 9).
